Access from almost anywhere!

All you need in order to get on and get started with our virtual biology lab software is a computer with an internet connection. No internet connection? Not a problem. We can also install our system on individual computers to allow for system access even when the internet goes down.

The only software required to run the simulations is the latest version of a flash media player.

Hardware requirements are simply limited to basic computer peripherals such as a mouse and keyboard.

FOR A MORE HANDS ON TRIAL OF OUR SOFTWARE, PLEASE VISIT:
